

SAP JOINs Word and Excel

Overview

Challenges

- Creation of print forms
- Timely and cost-effective adaptation of these forms

Customer benefits

- Use your Word and Excel skills
- Local PDF generation
- Scalability
- Usage of standardized interfaces
- Extension and adaptation of the templates
- No additional middleware necessary
- Flexibly adaptable to your scenario

Requirements

- Windows server with Office installation

The challenge

The creation and adaptation of your existing forms can quickly become time-consuming and costly. What if you could maintain your templates yourself in Word or Excel and transfer them 1:1 to the printer? We offer you the solution with our Word and Excel integration. Use your own templates. We enrich the templates with your data and print the results.

Your benefits

Developers are no longer needed to customize your forms. Use the know-how of your employees in Word and Excel. We offer you an internal service that automatically generates PDFs in the background from Office files and transfers them to the spool. Link SAP and the Office world seamlessly and reduce your costs for the creation and adaptation of forms. Data protection remains guaranteed, all services are installed locally at your site and therefore no data leaves your company.

Use the flexibility to create your own templates with Word or Excel. Choose the appropriate fonts and integrate your logos. Headless and independent of the SAPGUI we generate PDF files from your templates and send them to the spool.

Combine the best of both worlds

Your data is stored in SAP and you know the office world well and feel comfortable there. Use our integration to bring the two technologies together and reduce the cost of creating print forms.
